Does CM • CMS system become common technologies

for high BOD wastewater treatment in Vietnam?

Advanced wastewater treatment system for high BOD wastewater

Leading-edge technologies utilizing catalytic action of enzymes

The feature of CM and CMS system

The demonstration project was carried out in Vietnam !

As JICA's activities, the demonstration experiment using CM System was carried out in Vietnam.

Period: March 2016 ~ April 2017

Project name: Feasibility Survey on an Appropriate Advanced Wastewater Treatment System for High BOD wastewater

Experiment place : Nam Hai Fish Market in Haiphong City, Vietnam Experiment period : two months

What is the wastewater treatment system utilizing catalytic action of enzymes !

Brand name

CM System, Catalysis + Microorganism, CMS System (Patent registered) Catalysis + Microorganism + Support

CM System can decompose organic components due to the hybrid effect of microorganism and enzymes having catalytic action.

The most important feature of the CM System is the utilization of enzymes as a catalyst.

This technology is excellent for the reduction of both initial and running costs.

Remodeling. FR*:20ton/day In 2015 (Food processing company)

New construction. FR:60ton/day In 2012 (Food processing company)

CM System has been adopted by 21 companies in Japan

Remodeling. FR:900ton/day In 2008 (Leather processing company)

* FR: Flow Rate

http://www.tomo-e.co.jp

Difference with the conventional activated sludge method !

Enzymes in CM • CMS system produce microorganism. The system is effective and low-cost method due to the hybrid effect of microorganism and enzymes having catalytic action.

http://www.tomo-e.co.jp

Feature (Difference appears especially in high BOD wastewater processing) !

The experiment situation in Vietnam Flow rate : 150 Liter/day

Raw water sampling, at AM 0~7

Raw water tank, 200 L

Observation of treated water Just after water water intake

Observation of treated water 10 minutes after water sample intake

Flow rate was determined in response to BOD value of the raw water (1,300mg/L)

http://www.tomo-e.co.jp

Test results : analytical value of raw & treated water, and Vietnamese effluent standard (B standard)

Unit: mg/Liter

Raw water				
BOD	:	1,620		
CODCr	•	2,276		
SS	:	301		
n-Hex	:	48.2		
T-N	:	225.7		
T-P	•	11.7		
Coliform	•	4,018		

Treat		
BOD	31.3	
CODcr	: 203.1	
SS	: 12.4	
n-Hex	: 4.2	
T-N	: 47.3	
Т-Р	: 17.6	
Coliform	: 5,377	

Effluent sta	Effluent standard (B)			
50	•	BOD		
150	•	CODcr		
100	•	SS		
20	•	n-Hex		
60	•	T-N		
20	•	T-P		

The experiment was carried out under the supposition that difference between BOD and COD was 1,300 mg/l. However, COD was unexpectedly high. As the result, the COD level was not able to achieve the Standard. From a number of empirical standpoints, a solution is available if the facility is designed in manner consistent with the quality of wastewater.

Test period : September 8 to October 24, 2016. Total treated quantity:6,000 liter

http://www.tomo-e.co.jp

The analytical values tend to be high because excess sludge was never discharged, the value will become smaller if the excess sludge is discharged.

URL

CM • CMS system becomes common technologies for high BOD wastewater treatment in Vietnam !

Initial cost	Same as conventional methods.
Running cost	 30 to 50% compared to conventional methods Minimization of excess sludge generation (70~80% volume reduction) Reduction of electricity and chemical expense Facilities repayment is possible within 5~10 years.
BOD processing capacity	About ten times larger than conventional methods Conventional activated sludge method : ~4,000mg/L CM • CMS system : ~100,000mg/L
N-Hexane soluble processing capacity	About 7 times larger than conventional methodConventional activated sludge method:~100mg/LCM • CMS system : ~700mg/L
Malodor measures	Solution to odor complaint of conventional method CM • CMS system : Deodorized ability Trouble evasion with neighborhood
Conversion of existing facilities	Change of existing facilities to CM • CMS system is possible Partial change to CM • CMS system enable to stabilize facilities.
